CoPilot VL[®]

The first time. Every time.[®]

You shouldn't have to decide who deserves to be treated with the best technology for intubation. The CoPilot VL was created by clinicians, for clinicians as an easy to use, affordable video laryngoscope.

Every patient, every time.

Display

Lightweight, compact design offers portability

Battery indicator

Green light turns to amber when it's time to recharge (about 2 hours). Battery dead? No problem. Just use it plugged in.

Handle

Rugged design gives you the feel of traditional laryngoscopy but with video technology.

Eject button

Remove the used disposable sheath without contaminating your hands... or your patient.

Bougie port

Channel on the side of the disposable sheath gives you the extra option of easily guiding the endotracheal tube with a bougie.
